

## Using your Web space

This document will provide you with the necessary information to begin using your Seriously Internet web space. For this guide you will need the following information:

- Your **Seriously Internet** web space name
- Your **Seriously Internet** web space user name
- Your **Seriously Internet** web space password

To begin to use your web space you will need an FTP client to be able to upload any content you create to your area on the Seriously Internet server. There are several FTP clients available, most of which are relatively low cost, with some even being Freeware.

We recommend that you research which FTP program you wish to use, although, for your ease we have suggested some for you below:

<b>Name</b>	<b>Link</b>
WS_FTP Home	<a href="http://www.wsftp.com">www.wsftp.com</a>
Coffee Cup FTP	<a href="http://www.coffeecup.com/free-ftp">www.coffeecup.com/free-ftp</a>
FileZilla	<a href="http://filezilla-project.org">filezilla-project.org</a>
Cute FTP	<a href="http://www.cuteftp.com">www.cuteftp.com</a>

Each of the programs above, and any other that you use, will request the information above. This information is as you requested when your Seriously Internet web space was set up, if you no longer have a record of this please feel free to contact support. As the clients can vary in operation we are unfortunately unable to provide individual support for each one.
